

quED Work Sheet – Bell’s Inequality

- Set the source to produce the entangled state $|\phi_+\rangle$. Set the polarizers to the 16 different angle settings below and record the coincidence count rates for each setting. Calculate the expectation values E and the two S values. Mark the corresponding spot in the graph.

				=	$E(0^\circ, 22.5^\circ)$	=	$E(0^\circ, 22.5^\circ)$
				=	<input style="width: 40px; height: 20px;" type="text"/>	=	<input style="width: 40px; height: 20px;" type="text"/>

- Set the waveplate in the source to produce the $|\phi_-\rangle$ state (the $|HH\rangle$ state) and repeat the above measurements and calculations (you can use the automatic mode this time).
